Key for the list below

**Pleached** - Trees with a clear stem that have been trained to form a screen of branches and foliage on a single straight stem. They are trained onto frames of varying sizes.

**Girth** - This is an industry standard measurement and is the circumference of the tree trunk measured in the main 1m up the stem.

**Height** - We use the term overall height although trees will be growing and undergo maintenance whilst in our care which will involve pruning so this height can change. Overall height is measured from the trees soil level to the top of the tree canopy and should be used as a guide

**Spread** - A guide to the spread of the canopy of the tree and trees will undergo maintenance whilst in our care which can involve pruning so this can change.
